### Explanation of Maps

The first map in this appendix shows the general location of this literature search within one mile of the Missouri River in Iowa and Missouri. The following maps are county maps based on Corps of Engineers Navigation Charts of the Missouri River. Sites located on the maps are listed by their alphanumeric designation as listed in the main body of the report. Following these maps are copies of pertinent sections of Iowa county maps from the Andreas Atlas of Iowa. Chittenden's steamboat wreck maps conclude the appendix.

Vermillion, South Dakota 57069

Gentlemen:

This office has a requirement for expert services which we feel could be performed by your organization. The scope of work is described below including the time frame required for completion. If you are interested in providing the service, please submit your proposal including an itemized statement of cost.

A literature and records search of all known data to determine existing cultural resources on the Iowa side (east bank) of the Missouri River mile 498.03 to 732.31 between Sioux City, Iowa, and Rulo, Nebraska, from the Missouri River bank landward to the bluffs or 1 mile, whichever is the lesser. Sources to be researched include publications, manuscripts, archival material, published and unpublished archeological reports and site survey files of local, county, State, and/or Federal agencies. Diaries, journals, and reports of fur traders, explorers, travelers and military records shall also be researched. Included shall be an examination of data pertaining to architecturally significant buildings, structures, sites, objects, and districts listed on or eligible for nomination to the National Register of Historic Places.

The data shall be compiled into a report presented in two sections. The first section shall be an introductory section consisting of a concise outline of the prehistoric and historic development of the Missouri River corridor hereinbefore defined. The second section shall be a listing of cultural resources described and located on maps at least equal in quality to the Corps of Engineers river navigational charts of the Missouri River. Typical resources to be included are: fur trading posts, early military installations, early settler homes, steamboat wrecks, sites of buildings, and places of historical significance. Final reports are needed in this office in approximately six (6) months after award of contract. Please advise if you can meet this requirement.

Dear Larry,

Regarding our conversation of 10 minutes ago, I have examined the files of the Archaeological Survey of Missouri for both Atchison and Holt Counties and have found no mention of any archaeological resources within the flood plain of the Missouri River. This could be a factor of the lack of survey in those counties (Atchison has only 15 reported sites and Holt has only 4) but, as you know, sites within the Missouri River floodplain in this area are somewhat rare - the ones that do occur being all the more significant because of this.

I've enclosed a notice of the St. Louis meeting that I mentioned - if you can't make it I'll keep an ear and an eye open for you. There should be a small package in your mailbox within the next few days. Glad to hear that things are booming right along up on the northern plains; keep carving.

See you in Tucson,
